

I am KA7GKN an active amateur Radio operator. My home and antenna is about 150 feet south of old above ground power lines. They currently have days of noise and interference. The local power supplier, SRP, is helpful to degree.

with the onset of BPL I wonder per part 15 of the fcc rules if this BPL format causes interference to my licensed amateur radio station, I can call whom? to ask them to cease and desist until I'm finished operating my station for that period??? I truly doubt that will ever happen!

I am also concerned about homeland security, Mars radio, Fema, local government Etc. having issues but are squelched because of lobby money!

I always thought fiber optic delivery systems for computer high speed traffic is the wave of the future, not on poorly maintained power poles!

with regards, martin shapiro KA7GKN
